Dear MoveApps user,

over the last month we have been working on the improvement of the platform and fixing bugs. Just some days ago we added the section 'About us' introducing the MoveApps team. We have also added new features for the App settings and the development of Apps:

- App settings:
  - The settings of the Apps can be restored to their defaults
  - Files uploaded to an App by the user can be deleted
  - The settings saved in the App UI via the "Store settings" button are now passed along when sharing the Workflow with another user or making it a Public Workflow
- Development of Apps:
  - We have added the possibility for your app to be divided into multiple files. See instruction.
  - You can now specify in the *appspecs.json* if a library should be installed from git via any function from the remotes library. See instructions.
- App updates:
  - *Email Alert* App: sends email to user as soon as alert condition is met with tables and interactive map attached. If there are changes that you would appreciate to be included in this App, please do not hesitate to contact us.
  - *Animated Map (moveVis)* App: it is finally working as expected and produces now very nice animations
  - *Movebank Location* & *Movebank Non-location* App: we have added the license types and a filter to obtain only open access studies. We have also added more search options making it possible to search animal names as well.

And a last but not least we have a small request: **please help us improve Movebank by participating in this survey**. It will just take you about 15 mins to fill out and your feedback will be highly appreciated: https://survey.academiccloud.de/f/221856?lang=en

Happy holidays and wishing you all a great start of the new year!

With kind regards,

Anne Scharf

MoveApps Project Leader
