

Dear MoveApps user,

it has been a while since the last newsletter. After a period where we had little development time available, we're launching back into new features and improvements. We are working on some exciting changes that we believe will improve usability and flexibility. We will inform you in time about these changes.

We would like to introduce a new section in the newsletter presenting new Apps or established Apps that have undergone major changes. So far, it hasn't been easy to identify new Apps or those that have had major improvements. Our plan is to have this information at some point on the landing page, but for now we will provide you with the updates via the newsletter. For all developers: if the new version of your app includes significant changes let us know so it can be included in the next newsletter!

New Apps that have been developed over the last few months:

- Tag health monitoring
 - [Collar Health Alert App](#)
 - [Collar Health Filter App](#)
 - [Collar Health Shiny App](#)
 - Associated public Workflow: [Tag Health Monitoring - Public](#).
 - [Tag Diagnostics Plots](#)
- Statistical modelling
 - [Cox Proportional Hazard App](#)
 - [KM Survival App](#).
- Data visualization
 - [Relationship Graph](#)
 - [Plot Tracks On Custom Basemap](#)
- Data overview
 - [Wildlife Movement Statistics](#)
- Segmentation
 - [Track Segmentation: Stops and Movements](#)
- Data download
 - [Movebank Location](#): now provides the citation of the study as a text file (citation_metadata.csv) in the outputs.
- Geolocators
 - [TAGS, the Totally Awesome Geocator Service](#).
 - Associated public Workflow: [Geocator Data Cleaning \(TAGS\)](#).

Do not hesitate to reach out with questions, suggestions or feedback. We are always happy to hear from you.

With kind regards,

Anne Scharf
MoveApps Project Leader
